NAME: _____ DOB: _____

Please read and be certain that you understand the following information prior to signing this consent for treatment.

GLUTATHIONE

Glutathione is a molecule that is naturally found in your body and produced by the liver. It is also received through the ingestion of meats, fruits and vegetables. It consists of three amino acids: L-cysteine, glycine, and L-glutamate and is known to be a **powerful antioxidant** that detoxifies harmful compounds. Glutathione is involved in many processes in the body, including tissue building and repair, making chemicals and proteins needed in the body, and for the immune system to function properly.

BENEFITS OF GLUTATHIONE

Some possible benefits of receiving Glutathione may include:

- Improving Immune Function
- Increased Energy
- Maintaining Heart Health
- Reducing Cholesterol
- Preserving Healthy Eyes and Skin
- Anti-Aging

Glutathione may be helpful in diminishing symptoms for several medical problems including:

- Alcoholism
- Certain Asthma Subtypes
- Alzheimer's Disease and Memory Loss
- Cystic Fibrosis
- Cataracts and Glaucoma
- Ulcerative Colitis
- Diabetes
- Heart Disease and High Cholesterol
- Liver Disease and Hepatitis
- Osteoarthritis
- Lyme Disease
- Parkinson's Disease
- Autism
- Side Effects of Chemotherapy and Hemodialysis

WHO CAN RECEIVE GLUTATHIONE?

Most people can benefit from Glutathione. Glutathione is not the right choice of treatment for children under the age of 12, women who are pregnant or breastfeeding, or patients with a history of asthma.

HOW IS GLUTATHIONE GIVEN?

Glutathione is given as a medication through an IV (intravenous) infusion or by intramuscular injection.

POSSIBLE RISKS

The most common reactions are called local reactions, these are often limited to a small area around the IV start site or injection site. Some redness, bruising, minor bleeding, muscle soreness, and swelling at the injection site may occur. This should start to get better within forty-eight (48) hours. Burning or stinging is possible upon injection. There are very little known side effects of Glutathione but may include minor rash, trouble breathing, abdominal cramping, and bloating.

I certify that I have read or have had read to me the contents of this form. I understand the risks involved in this procedure. I have had the opportunity to ask any questions that I had and all of my questions have been answered. I understand the possible complications of injections include infection, minor bruising and bleeding at injection sites, dizziness, headaches, and possible fainting from the site of blood. I understand that unforeseeable complications could occur. I hereby release Hill Country Infusions from all liabilities regarding my treatment with Glutathione. I authorize Hill Country Infusions to perform the designated procedure.
